Model JL112 & J112 - Pendent ECLH - Extended Coverage Light Hazard ECOH - Extended Coverage Ordinary Hazard ECOH - Extended Coverage Ordinary Hazard - Quick Response

Model JL112 & J112 ECLH/ECOH Pendent & Recessed Pendent (SIN R7216 – Link and RA7216 – Bulb)

- Quick Response for Light Hazard (16' x 16' (4.9m x 4.9m), 18' x 18' (5.5m x 5.5m) and 20' x 20' (6.1m x 6.1m) spacing)
- Quick Response for Ordinary Hazard (12' x 12' (3.7m x 3.7m) and 14' x 14' (4.3m x 4.3m) spacing)
- Standard Response for Ordinary Hazard (16' x 16' (4.9m x 4.9m), 18' x 18' (5.5m x 5.5m) and 20' x 20' (6.1m x 6.1m) spacing)

### Features

- 1. Extended Coverage Ordinary Hazard and Light Hazard protection to 400 ft<sup>2</sup> (37.2 m<sup>2</sup>) per sprinkler.
- 2. Nominal K = 11.2 (160).
- 3. Available in Pendent or Recessed Pendent styles.
- 4. Recessed pendent version provides <sup>3</sup>/<sub>4</sub>" (19mm) adjustment to flush pendent position (see adjustment table).
- 5. Available in brass, chrome and polyester coated finishes.
- 6. For applications as per NFPA 13.

## **Approvals Organizations**

- 1. Underwriters Laboratories, Inc. (UL)
- 2. Underwriters Laboratories of Canada (cULus)

# **UL Listing Category**

Sprinklers, Automatic and Open Extended Coverage Sprinklers-Ordinary Hazard Occupancy UL Guide Number – VNIV.

The Reliable Model JL112 and J112 sprinkler are Extended Coverage Sprinklers for use in both Light and Ordinary Hazard 1 and 2 occupancies with a coverage area of up to 400 square feet (37.2m<sup>2</sup>) per sprinkler. For ordinary hazard applications it is a Standard Response Sprinkler.

For all light hazard applications it is a Quick Response sprinkler. For ordinary hazard applications, it is a Standard Response sprinkler when the spacing is 16' x 16' ( $4.9m \times 4.9m$ ) and larger. When the spacing is 12' x 12' ( $3.7m \times 3.7m$ ) or 14' x 14' ( $4.3m \times 4.3m$ ), the sprinkler is Quick Response for ordinary hazard applications.

The use of ECLH/ECOH sprinklers can provide lower installation costs by requiring fewer sprinklers, less piping and reduced labor.

ECLH/ECOH sprinklers are to be installed according to the design criteria shown in this bulletin, NFPA 13, and all other local codes and ordinances. Flows and pressures as shown on pages 2 and 3 of this bulletin, must be used for the appropriate spacing and for the designated hazard classifications.

SIN RA7216 is Corrosion Resistant with White Polyester Coating.

Model JL112 Pendent (R7216) - Link

Model J112 Pendent (RA7216) - Bulb

This ECLH/ECOH sprinkler is available in various finishes, which includes a white polyester corrosion resistant finish.

ECLH/ECOH sprinklers are available in a pendent or an attractive recessed pendent type which provides up to <sup>3</sup>/<sub>4</sub>" (19mm) of escutcheon adjustment.

## **Design Criteria**

Reliable Model JL112 & J112 ECLH/ECOH sprinklers shall only be used in systems designed and installed in accordance with NFPA 13 and all other local codes and ordinances. The following design criteria also apply:

- Minimum sprinkler spacing is 8 ft (2.44m).
- Sprinklers have a minimum flow requirement for each spacing as shown in the Flow Requirements Table on the reverse side.
- Sprinklers are only to be used in systems hydraulically designed per NFPA 13.
- Deflector to commodity clearance shall be a minimum of 18 inches (457mm).
- ECOH sprinklers shall be installed in unobstructed constructions as defined in NFPA 13. For open web truss construction web thickness is not to exceed 1 inch (25.4mm).
- ECOH sprinklers which are installed above the bottom of a horizontal obstruction, shall have their deflectors located as shown in the Obstruction Table on page 3.
- Sprinklers can be installed under a sloping ceiling not exceeding 2 inches (50.8mm) of rise in 12 inches (304.5mm).
- Maximum working pressure is 175 psi (12.1 bar) at the sprinkler.

The Reliable Automatic Sprinkler Co., Inc., 103 Fairview Park Drive, Elmsford, New York 10523

# Installation Requirements for Under Concrete Tees - cULus

- The stems of the concrete tee construction must be spaced at less than 7.5 feet (2.3m) on center but more than 3 feet (0.9m) on center. The depth of the concrete tees must not exceed 30 inches (762mm). The maximum permitted concrete tee length is 32 feet (9.8m); however, where the concrete tee length exceeds 32 feet (9.8m), non-combustible baffles, equal in height to the depth of the tees, can be installed so that the longitudinal space between the tees does not exceed 32 feet (9.8m) in length.
- The sprinkler deflectors are to be located in a horizontal plane at or above 1 inch (25.4mm) below the bottom of the concrete tee stems.
- When the sprinkler deflectors are located higher than a horizontal plane 1 inch (25.4mm) beneath the bottom of the concrete tee stems, the obstruction to sprinkler discharge criteria requirements of NFPA13 for extended coverage upright sprinkler applies.

Distance from Sprinkler to Side of Obstruction	Maximum Allowable Distance Deflector Above Bottom of Obstruction

The equipment presented in this bulletin is to be installed in accordance with the latest published Standards of the National Fire Protection Association, Factory Mutual Research Corporation, or other similar organizations and also with the provisions of governmental codes or ordinances whenever applicable. Productsmanufactured and distributed by Reliable have been protecting life and property for over 90 years, and are installed and serviced by the most highly qualified and reputable sprinkler contractors located throughout the United States, Canada and foreign countries.
